

Inscribe® Modules Available

Inscribe® Hospital Discharge

The Inscribe Hospital Discharge module provides a specialized workflow process for selecting the appropriate short or long-term care facility for each patient discharged from the hospital. It offers incredible efficiency gains and reduced paperwork for those who need to place discharged patients in short and long term care facilities.

Inscribe® Physician

The Physician module provides physicians and their staff members with the ability to electronically fill out referral and order forms, and allows physicians to electronically sign order documents securely on the Web. This increases the speed at which your orders are returned by streamlining the process and reducing paperwork.

About Us

Authentidate Holding Corp. (Authentidate®) is a provider of secure health information exchange, workflow management services and telehealth solutions. The company's software and web-based services enable healthcare organizations and other enterprises to increase revenues, reduce costs and enhance patient care by eliminating paper and manual work steps from clinical and administrative processes. The web-based services are delivered as Software as a Service (SaaS), and only require that customers have an Internet connection and web browser. The company's healthcare customers and users include leading homecare companies, health systems and physician groups. These organizations utilize the company's products and services to coordinate care for patients outside of acute-care.

Authentidate is committed to providing secure, trusted, innovative technologies and partnering with customers to help them solve their business challenges.

Referral & Order Management Solution

Inscribe® Healthcare

Inscribe Healthcare is a secure online referral and order management solution that enables healthcare organizations to, exchange, update, complete and electronically sign healthcare orders faster and more accurately than ever before. Inscribe users report improvements of more than 30% in care order completion time, as well as increased staff efficiency and accuracy.

Inscribe's community portal helps hospitals, health insurers, physicians, post-acute care and home care providers to streamline their workflow while reducing costs.

Features

- ♦ Improved management controls, data accuracy and audit trails
- ♦ Customizable referral forms, and order forms including Certificates of Medical Necessity (CMN), Written Orders, Plan of Care and Interim Orders, claims attachments and more
- ♦ Integration with Electronic Medical Records (EMR), practice management and billing systems
- ♦ Enhanced regulatory compliance

The AuthentiProof™ auditable timestamp is applied to documents to ensure document authenticity and support audits with electronic records. Inscribe provides secure, trusted web-based referral and order management for healthcare firms seeking improvement in key operating business processes without having to make up-front investments in hardware or software. Inscribe is quick to learn and easy to use.

Benefits

- ♦ Accelerates referral completion and reimbursement times by more than 30%
- ♦ Facilitates completion and accuracy with rules-based electronic forms
- ♦ Reduces paper management and related overhead costs
- ♦ Improves communications and strengthens relationships with referral sources

Inscribe incorporates rules-based electronic forms, intelligent routing, transaction management, electronic signatures, content authentication and automated audit trails. Both web and fax based communications are integrated into one automated and trusted workflow solution. The service enables healthcare referral and order management, care plan review, electronic forms routing and e-signature, discharge communications, secure patient communications and vital signs monitoring, all on the same platform. Customers can also implement other pre-designed workflows or design their own customized workflow.
